

Baby Walker Survey

The Canadian Paediatric Surveillance Program is doing a one-time survey on baby walker injuries, in lieu of a full study, to determine the degree of seriousness of this issue.

The Injury Section, a surveillance group within Health Canada, has commissioned this survey.

Please take a few moments to answer the following question.

During the past year, have you cared for any children less than 18 months old with injuries sustained while using a baby walker (walker or activity centre mounted on wheels)?

No Yes If yes, how many? _____

Comments/Description

Please return this survey with your monthly reporting form.

Thank you for your participation.
